[1]Professor and Honorary Consultant in Anaesthesia, Perioperative and Critical Care Medicine, University College London Hospitals, UK

It is a great pleasure to welcome you to *Advances in Perioperative Care*, a new open-access journal from UCL Press dedicated to advancing the science and practice of perioperative care internationally. Our vision is to cultivate a vibrant international community of scholars and clinicians committed to improving patient outcomes and experiences through research, education and professional dialogue.

The field of perioperative care is evolving rapidly, shaped by the expertise of a diverse range of professionals who support patients throughout their surgical journey. Today, high-quality perioperative care extends well beyond the operating theatre to encompass the holistic optimisation of patients before surgery, their management during the procedure itself, and to support them throughout recovery, often continuing into community. When delivered effectively, perioperative care is grounded in the best available evidence and characterised by multidisciplinary collaboration across the entire patient pathway.

Advances in Perioperative Care provides a platform for multidisciplinary learning and knowledge exchange. Our mission is to publish high-quality, clinically relevant work that informs practice, challenges convention and drives continuous improvement. We begin our publishing journey with a regular series of case vignettes – concise, practical accounts designed to share experiences and insights from clinical practice. We hope this format resonates with clinicians, nurses and allied health professionals, offering accessible learning that reflects the realities of modern healthcare. Such vignettes offer individuals and teams the opportunity to share expertise and innovations in patient care, spanning diverse areas of practice including basic science, clinical management, service improvement and policy development.

Publishing with *Advances in Perioperative Care* offers clear advantages. As part of UCL Press, the world's first fully open-access university press, every article is freely and immediately available worldwide, ensuring maximum visibility and impact for your work. Our open-access model removes all barriers to cost and access, amplifying global reach. Our editorial team is committed to working closely with authors to publish cases that offer clear learning opportunities for the wider community.

All articles are published under Creative Commons licences, allowing authors to retain copyright and enabling unrestricted sharing and reuse for education and research. In so doing, we support a sustainable, inclusive and collaborative model of scientific communication, reflecting the core values of perioperative care itself.

We invite you to join the community and sign up for monthly case vignettes delivered directly to your inbox at no cost. Many cases are accompanied by engaging summary infographics and interviews with lead authors, designed to consolidate learning in a concise and digestible format. Finally, we encourage you to consult our Author Guidelines and submit your own case vignette, contribute to the field and become a published voice in perioperative care.

On behalf of the editorial team and the wider UCL Press team, we welcome you and look forward to your contributions.
