

Advances in Perioperative Care

Open for submissions

Advances in Perioperative Care (APOC) is a Diamond Open Access journal published by UCL Press – free to publish, free to read, with no article processing charges.

We publish case reports and narrative articles that translate evidence into practical guidance for the multidisciplinary perioperative team.

In our distinctive format, articles contain a clinical scenario, framing a clear learning objective and delivering actionable recommendations. We provide a free scholarly resource of educational articles related to any aspect of perioperative care.

- **Free to publish, free to read**
Published open access with no article processing charges.
- **A focus on educating**
Articles deliver objective learning outcomes and real-world workplace problems clearly explained.
- **Supportive editorial feedback**
Collaborative editorial process to improve the quality of articles and support authors through peer review.

Advances in Perioperative Care is a Diamond Open Access journal published by UCL Press, that aims to promote a multidisciplinary approach to the care of patients contemplating, undergoing and recovering from surgery.

The journal welcomes case reports and narrative articles related to any aspect of perioperative care and recognises the importance of attracting a wide variety of healthcare professionals to reflect the multidisciplinary nature of this growing specialty. Examples of topics can include, but are not limited to, the following:

- Pharmacy interventions in surgical patient care
- An interesting clinical case focusing on a single aspect of management
- Nursing innovations in perioperative care
- Clinical management
- Data and digital innovation in perioperative care
- Therapies to improve recovery and wellbeing of patients

The journal has been developed and is edited by academics and clinicians at the Centre for Perioperative Medicine at UCL (University College London, UK), focusing on case studies and other forms of evidence-based learning across topical issues to support learning, by providing an open access resource of informative articles related to any aspect of perioperative care.

The journal welcomes submissions from authors across the globe on perioperative care. See our [author guidelines](#) for more information.
